

Airbi AROM – Ultrasonic humidifier and aroma diffuser

Key features

- **Ultrasonic humidifier**
- **Aromatherapy – as powerful as specialized diffusers**
- **Easy top-fill design**
- **Simple operation**
- **Manual mode**
- **Colorful lighting**

Description

Airbi AROM **humidifies** and **scents the air**, with **easy top-fill** and **adjustable colored lighting**.

This device employs proven ultrasonic technology, making it highly effective at humidifying the room's air. At its highest setting, it releases the equivalent of a glass of water into the air every hour.

However, it offers more than typical ultrasonic humidifiers: the **water tank is filled from the top, which is significantly more convenient than most similar humidifiers**. Simply turn off and unplug the device, remove the top lid, and fill it with water using a pitcher or similar container.

The tank has a capacity of 2.5 liters, allowing it to operate for **over 10 hours on a single fill**, even at maximum output. Don't worry if it runs out of water—the device will automatically shut off.

With the Airbi AROM, you can also use natural essential oils, adding them directly to the water in the tank. This results in a **much stronger scent compared to other humidifiers, distributing fragrance as intensely as single-purpose aroma diffusers**, effectively filling your living room or similar spaces with delightful aromas.

Operating the device is a breeze. A single rotary knob turns the unit on and off and controls the output level. A second button controls the tank lighting. You can set your favorite color or let the colors cycle through automatically.

Spare filters are the available accessories for this product.

Technical parameters

Water tank capacity:	2.5 L
Humidifying power:	up to 230 ml/h (\pm 30 ml/h)
Power consumption:	15 W
Noise:	< 35 dB (A)
Power input:	220–240 V, 50/60 Hz
