

Air purifier Airbi GUARD

Key features

- Air quality sensor
- Air quality indicator
- Filter replacement control systém
- 3 operating modes
- Dimmable display
- Ultra-quiet engine
- Operation timer
- Foldable and lightweight

Description

New air purifier GUARD from Airbi is a real protector of your home realm which keeps it free from a great deal of harmful substances. The triple filtration system includes H13 class HEPA filter (filters 99,95 % of pollen, dust, mites, bacteria, viruses and more), high quality activated carbon filter (absorbs gases and odours) and pre-filter capturing biggest particles. Your home is therefore filled with fresh and clean air for you and your loved ones.

When using GUARD you can choose between manual and automatic user mode. The automatic mode is very practical, because it adapts fan speed according to pollution rate to keep the room clean. Manual mode has two speeds (hi and low) and is useful for continuous purification of your air for a longer time. For example, when cooking, you turn on manual hi speed. On the contrary, during night in your bedroom when you probably prefer silence, it is best to choose manual low speed to keep fresh air over the night. Dimmable display is also very convenient during sleeping, so nothing disturbs your well deserved rest. You can also use built-in timer for automatic shutdown after 2, 4 or 8 hours.

On the display of GUARD you can find buttons and indication of selected setting, but mainly there is coloured LED panel for quick information about quality of the room air. Blue color means good air, orange reports a little worsened quality and red indicated very polluted air. When the automatic mode is used, fan speed also corresponds to the LED color.

Thanks to compact dimensions, GUARD is perfect for working in smaller rooms up to 16 m², such as bedroom or kitchen, and due to its low weight (2 kg) it is very easily portable.

Filtration system

1. Pre-filter - the main function of this filter is to catch large dust particles in order to prolong the life of the others filters. This filter can be vacuumed.

2. Activated carbon filter - absorbs various smells, such as formaldehyde. This colourless gas with a strong odor is often considered the most dangerous harmful substance inside flats because it is highly irritating for the upper airways and eyes.

3. HEPA filter class H13 - removes particles that have a size of 0.1 µm with efficiency of more than 99.95 %. It removes dust, pollen, smoke, animal allergens and fungal spores.

Technical parameters

Air output: Up to 120 m³

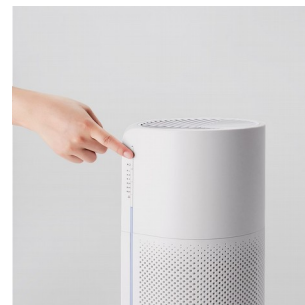

Power consumption: 23 W

Noise level: < 55 dB

Designed for rooms: max. 35 m²

Colour: white
