

# Airbi MAXIMUM – humidifier and air purifier 2 in 1

## Key features

- Purifies and humidifies the air
- 5 operating modes of humidification
- Built-in digital hydrostat
- Natural evaporation
- HEPA and carbon filter
- Rotating discs with antibacterial treatment a BSS filter
- PLASMA system
- Very quiet operation
- Clear LCD display
- Indication of filter replacement
- Automatic shut-off when the tank is empty

## Description

When it comes to health, there is no room for compromise. **The Airbi MAXIMUM is one of the best things you can do for the quality of your air.** MAXIMUM is an extremely powerful humidifier and thanks to the filtration system it is also a full-fledged air purifier. This is a combination that cannot withstand comparisons between competitors. It's up to you whether you use both functions at the same time, or each one separately.

The high performance of the humidifier is further enhanced by the technology used - MAXIMUM uses the principle of natural evaporation, just as water evaporates in nature. This means that the water is broken down into small and light microdroplets that evaporate easily into the air. Unlike other methods, these small particles do not leave traces of minerals on the furniture, so you do not need to spend extra time cleaning. Natural evaporation is provided by a total of 38 rotating disks, which attach water to their large area and then disperse it into the surroundings by means of a built-in fan.

This way, **MAXIMUM can disperse up to 750 ml of water into the air per hour, making it one of the absolute top.** The built-in hydrostat ensures an ideal level of humidity, so you don't have to waste your time checking.

However, MAXIMUM is an air washer, so it does not lag behind even in the area of air purification.

**When filtering, it combines several technologies that together do not give impurities a chance** - the air passes through washable pre-filters, water as a natural filter and a highly efficient HEPA filter. In this way, the air is purified from pollen, dust particles, mold spores, bacteria and viruses. And if a virus overcomes these filter walls, the PLASMA system will destroy it. A carbon filter reliably handles the odours and dangerous gases.

Wherever there is a standing water for a long time, there is a risk of bacteria growth. Humidifiers are no exception, so MAXIMUM is equipped with a **patented BSS filter that suppresses bacteria.** Rotating discs also have a special antibacterial treatment, which traps up to 99.9% of bacteria from the ambient air. Simply antibacterial equipment non plus ultra.

MAXIMUM has a **clear touch LCD panel**, with which you can easily set up the device to your requirements. Thanks to the built-in hydrostat and air quality sensor you will immediately find information about the current cleanliness and humidity of the surrounding air.

## Technical parameters

Water tank capacity:	9 l
Humidifier power:	Up to 750 ml/h
Air output:	210 m <sup>3</sup> /h
Power consumption:	7-24 W
Noise level:	25-46 dB
Frequency:	50/60 Hz
Voltage:	220-240 V
Designed for rooms:	max. 85 m <sup>2</sup> / 210 m <sup>3</sup>
Colour:	white
