

Airbi PRIME – humidifier and air purifier 2 in 1

Key features

- 2 devices in 1: humidifies and purifies the air from dirt in the environment
- 5 operating **modes**
- **Built-in digital hydrostat**
- **Natural evaporation**
- **Water as a filter**
- **Rotary discs with antibacterial treatment and BSS filter**
- **PLASMA system**
- **Very quiet operation**
- Clear LCD display
- Automatic shut-off when the water tank is empty

Description

Airbi PRIME – is intelligent appliance that can solve problems with dry and polluted air. It is state of art machine with a sophisticated internal technology to help wherever there is need to solve breathing problems caused by dry air, flitting dust and other pollutants occurring in the indoor locations. **Airbi PRIME is very powerful humidifier** operating on the principle of cold evaporation. Special evaporating slowly turning discs absorb water and fan blows dry air humidified through these rotating discs. Humidified air is then dispersed into the surrounding area. The natural evaporation when water diffracts into very small and light particles, results in better dispersion of microparticles of water than the conventional humidifiers. The big advantage is the fact that the water that naturally evaporates, **leave no visible traces of mineral substances caught on furniture, TV, etc.**

Airbi PRIME consumes minimum energy and is easy to use, since it has a built-in hydrostat through which you can regularly check and maintain optimal humidity in the home (40-60%). Model PRIME, however, can do more - **using water as a natural filter catch pollutants from the air.** Users of this appliance are pleased by undemanding of maintenance and especially the very low cost of operation. To prevent the proliferation of bacteria in the water, Airbi PRIME is equipped with the **patented filter BSS (Bio-Silver Stone)** and internal rotating discs are covered with special antibacterial coating which eliminates bacterial growth. That's why PRIME captures up to 99.9 % of bacteria present in the ambient air and the device comes so naturally clean and humidified air.

Airbi PRIME is equipped with Plasma System, a unique technology that makes it possible to attack airborne viruses, breaks it and thus prevent their effects on the human organism. This technology is not dependent on filtration systems, but the use of positive (+) and negative ions (-), which operates throughout the room space and increase the chance for real viruses disposal. **Airbi PRIME is ultra quiet (25-36 db)** and among its other benefits belongs energy modesty (only 7-15 W). The device can be used in five operating modes - automatic, high speed, medium speed, low speed, night mode. There is also a safety feature that, in the absence of water the unit will turn itself off and the control panel alerts the user via a blinking icon on the lack of water in the water tank of the appliance.

Technical parameters

Water tank capacity:	7 l
Humidifier power:	Up to 450 ml/h
Air output:	156 m ³ /h
Power consumption:	7-15 W
Noise level:	25-36 dB
Frequency:	50/60 Hz
Voltage:	220-240 V
Designed for rooms:	max. 65 m ² / 160 m ³
Colour:	white
